- 👁️ Single or dual DMX channel operation
- 👁️ 3000 K warm white LED array
- 👁️ Available in 19°, 26°, or 36° beam spreads

Our **NEW** ... FXLE3030W

If you have been putting off replacing your energy guzzling halogen ellipsoidal stage lights, your wait is over. Our new FXLE3030W LED ellipsoidal uses a three hundred watt array to deliver more lumens than our 750 watt halogen model. Not only does it deliver the punch you want, it does it while using less than half the energy as the incandescent version. This fixture offers all the features you have been looking for like, single DMX channel operating mode, super quiet smart fan, rotating barrel for gobo alignment, and sturdy metal construction ideal for production and touring uses. Unlike some of our competition this fixture comes complete with a lens tube of your choice, gel frame, M size gobo holder, power cord with turn and lock connectors for power in and out, and a three pin DMX cable. Visit us online to find out more on why your wait is over.
