RA-122 Provides Backup Scenes for your Lighting Console.

Features

Application Note:
RA-122 Provides Backup Scenes for your Lighting Console

The RA122 has a unique feature which allows it to recall previously stored scenes should the main lighting console become inoperable.

If you or someone you know has ever experienced a lighting console failure during a performance, then the panic that ensues is well known. Lightronics RA-122 is a rack mounted dimmer which has architectural functions built-in, including 64 scene recalls. Storing several important scenes in advance could really save the show during an emergency by being able to recall those scenes through the architectural functions of the RA-122.

12 Channels

2400 Watts / Channel

Only Occupies 2 Rack Spaces
